

Press release

ABO-GROUP Environment announces its listing on the continuous market on Euronext Brussels and the appointment of a liquidity provider

Improving liquidity and visibility on the stock market

Admission to dual listing on Euronext Paris expected in the coming weeks to support the rapid growth of the Group in the French market

Growth prospects supported in Europe

Ghent, Belgium, 6 April 2021 - ABO-Group Environment (BE0974278104 - ABO), a specialised engineering company focused on geotechnical, environmental and soil remediation services, will be listed on the continuous trading market of Euronext Brussels as of today, with the Degroof Petercam bank (DPAM) acting as liquidity provider.

Improved liquidity of the share

The shares of ABO-Group, which were previously listed on the dual fixing market, will now be listed on the continuous Euronext market in order to improve the liquidity of the share and its visibility on the stock exchange.

Dual listing on Euronext Brussels and Paris

This important step serves to prepare the application for a dual listing of the shares on Euronext Paris and Brussels. ABO-Group announced the submission of a dual listing application with the publication of its annual results for 2020. It is now waiting for the validation from the listing commission of Euronext Paris.

Supporting the Group's rapid expansion on the French market

This listing reflects ABO-Group's desire to continue to accelerate its development in France, one of its strategic markets. The group will realise more than 50% of its turnover in France, partly due to three recent acquisitions.

Visibility and awareness

An entry on the Paris stock exchange will provide more awareness and visibility. This in turn will support the further commercial expansion of the group and the consolidation of the French geotechnical and environmental market. ABO-Group is confident about these developments, given its good results in terms of operational and financial integration.

Strong growth prospects in its home countries

The demand for studies in France, Belgium and the Netherlands is rising sharply in anticipation of the post-COVID recovery.

There is also the issue of 'climate change'. Recent floods and droughts have not only had an impact on the communal infrastructure (collapsing roads, unstable bridges, etc.), but are also having an increasing impact on the stability of homes.

Doubling of engineers in 'Natural Risks'

In order to meet the market demand, the number of geotechnical engineers in our newest department, 'Risques Naturels' (*Natural Risks*), will therefore almost double in the coming months.

About ABO-GROUP

ABO-GROUP is a specialised engineering company focusing on geotechnical, environmental and soil remediation services. ABO-GROUP operates in Belgium, The Netherlands and France, as well as internationally, through its consultancy and testing & monitoring departments. ABO-GROUP guarantees a sustainable solution to its customers. For a more detailed description of the group's activities, please visit the ABO-GROUP website (www.abo-group.eu).
